

ARAL SEA

ARTEMIA POPULATION DYNAMICS

PROJECT FUNDING SOURCE:
NATO SCIENCE FOR PEACE
PROJECT #980859

**Economic and Ecological Benefits from Sustainable
Use of the Aral Sea Artemia Resource**

Prepared by:
Kakabay Hankuliev
Aral Artemia Co.
&
Brad Marden
Weber State University

Specific Objectives of Research

- Document current status of emerging Artemia population
 - Record Artemia population dynamics
 - Identify cyst quality characteristics

Commercial Potential of the Aral Sea Artemia Resource

Artemia Research Program

- Both East and West Aral Sea
- Sampling locations along transect
- Five transects on West Aral
- Two transects on East Aral
- 19 sample locations on West Aral
- 10 sample locations on East Aral
- Vertical plankton net haul (2x/location)
- Sampling frequency: 1-2 times/month (April-November)

Sampling Logistics and Equipment

Difficult access causes
some modifications in
sampling program

East Aral only by ATV.

West Aral by truck and ATV

Lake access by 4-meter
rigid-inflatable vessel

Former sea bed sediments
are highly variable

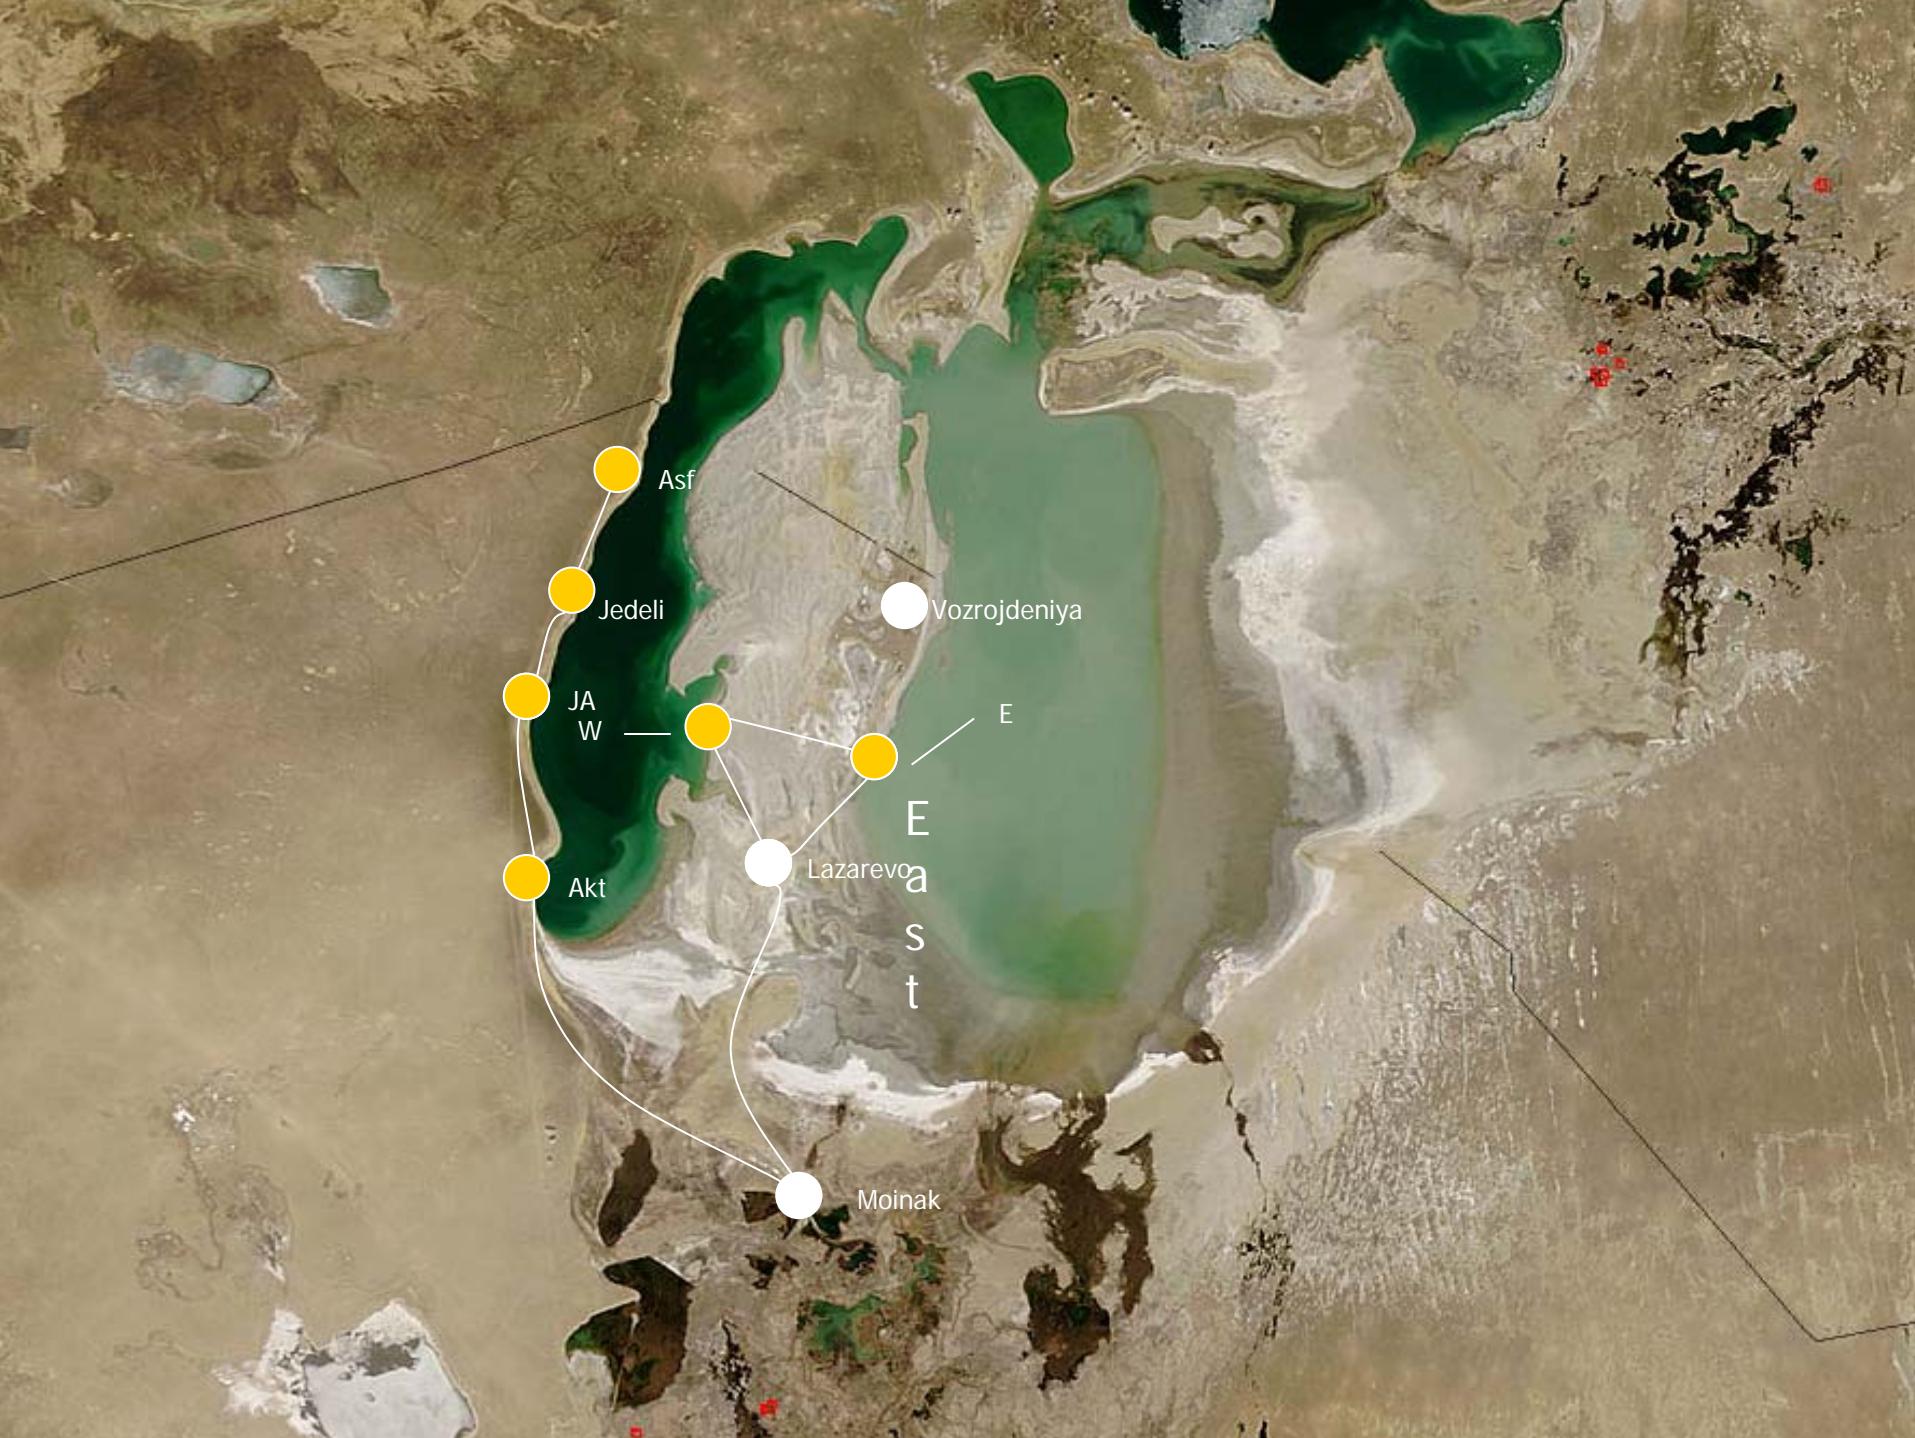

Each ATV expedition = 300
to 500 km.

Expedition conditions

- Poor weather
- Equipment failure
- Prolonged delays

Aral sea sampling schedule 2005

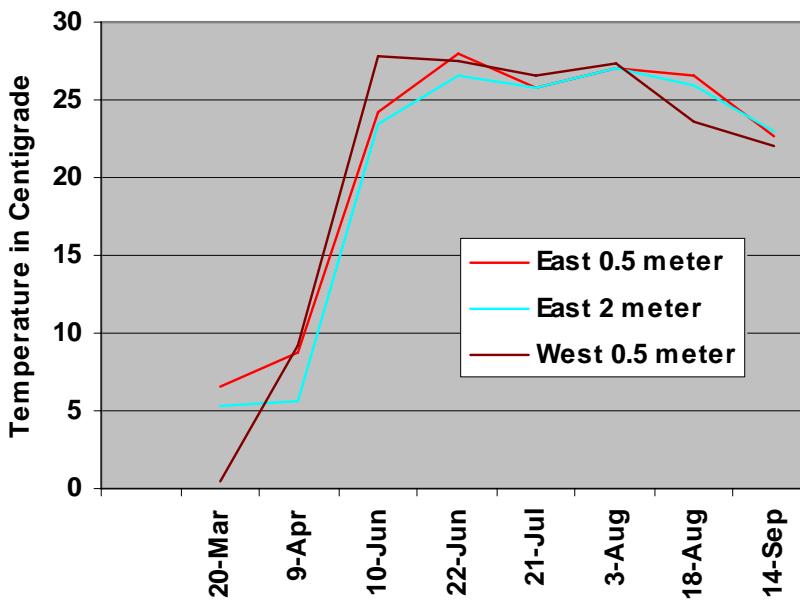

Expedition date	Sampling location	Sample sites
Mar 20 2005	East Aral sea	10
Mar 21 2005	West Aral sea	9
April 09 2005	East Aral sea	10
April 11 2005	West Aral sea	9
June 10 2005	East Aral sea	10
June 11 2005	West Aral sea	10
June 20 2005	East Aral sea	10
June 22 2005	West Aral sea	10
July 21 2005	East Aral sea	10
July 27 2005	West Aral sea	20
Aug 03 2005	East Aral sea	10
Aug 04 2005	West Aral sea	10
Aug 16 2005	West Aral sea	10
Aug 18 2005	East Aral sea	10
Sept 14 2005	East Aral sea	10
Sept 15 2005	West Aral sea	9

East Aral female reproduction

Aral Sea Artemia Cyst Abundance

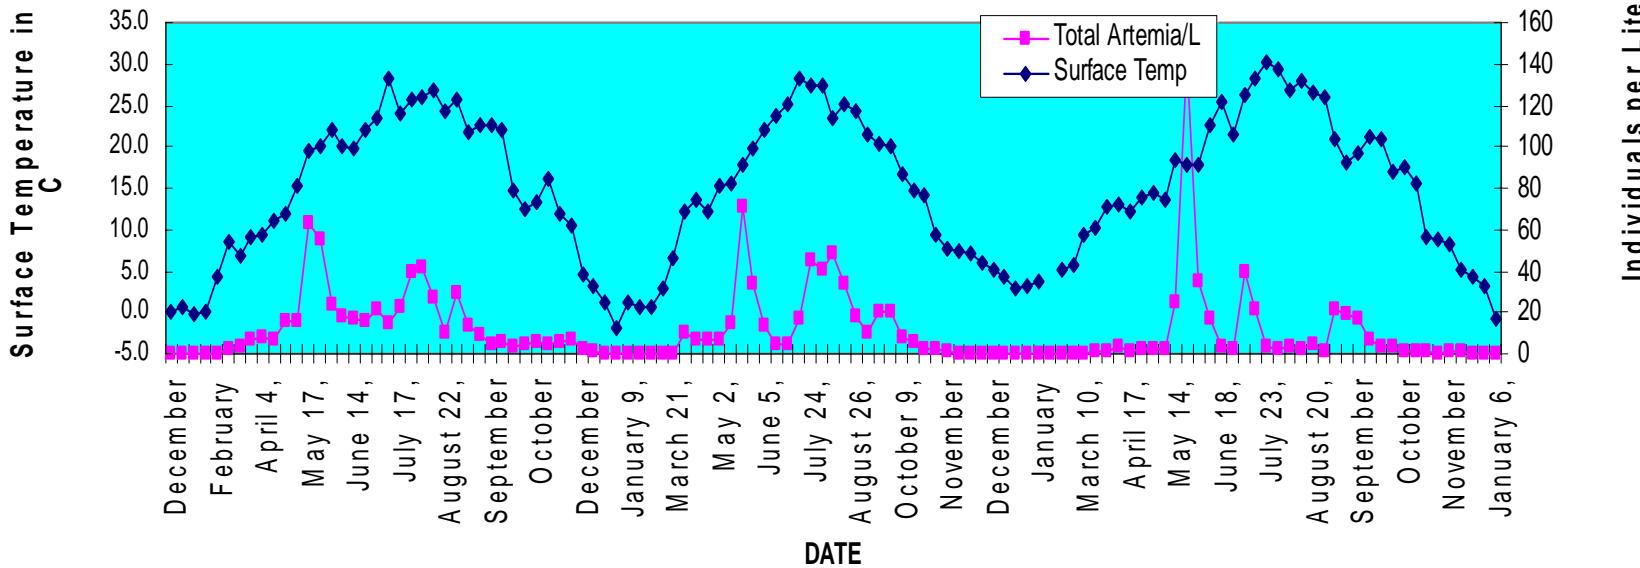

A satellite photograph of the Aral Sea region. The lake itself is a dark blue-green color, appearing in two distinct, separate basins. The surrounding land is a mix of brown, tan, and green, with numerous small white spots indicating agricultural fields or settlements. The overall image shows significant environmental change, particularly the reduction in the size of the lake.

How Does the Aral Sea Artemia Population Compare to the GSL Artemia Population?

WATER TEMPERATURE AND POPULATION GROWTH

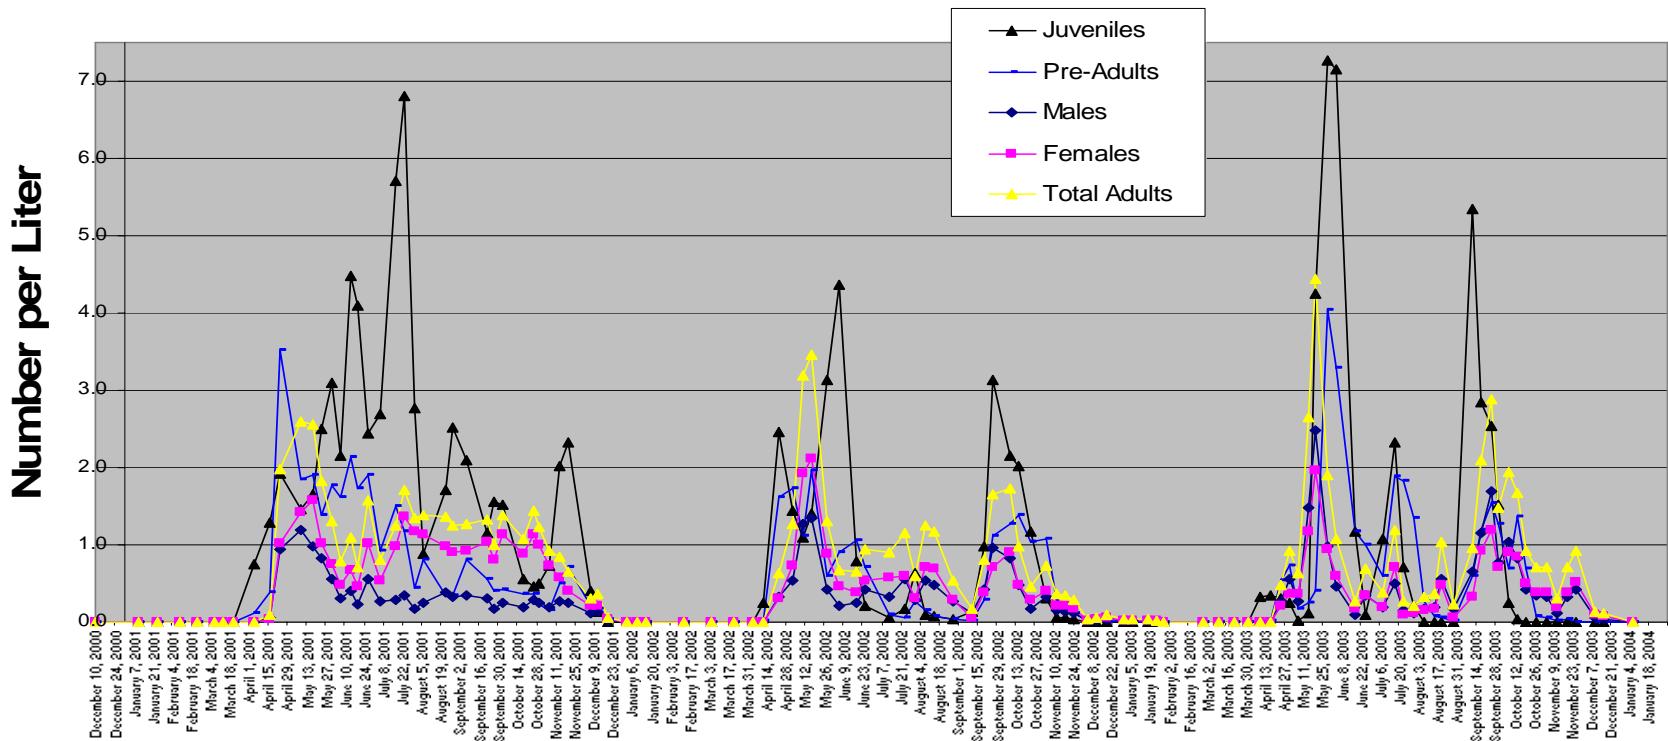

Total Artemia and GSL Water Temperature
2001-2003

ATF DATA

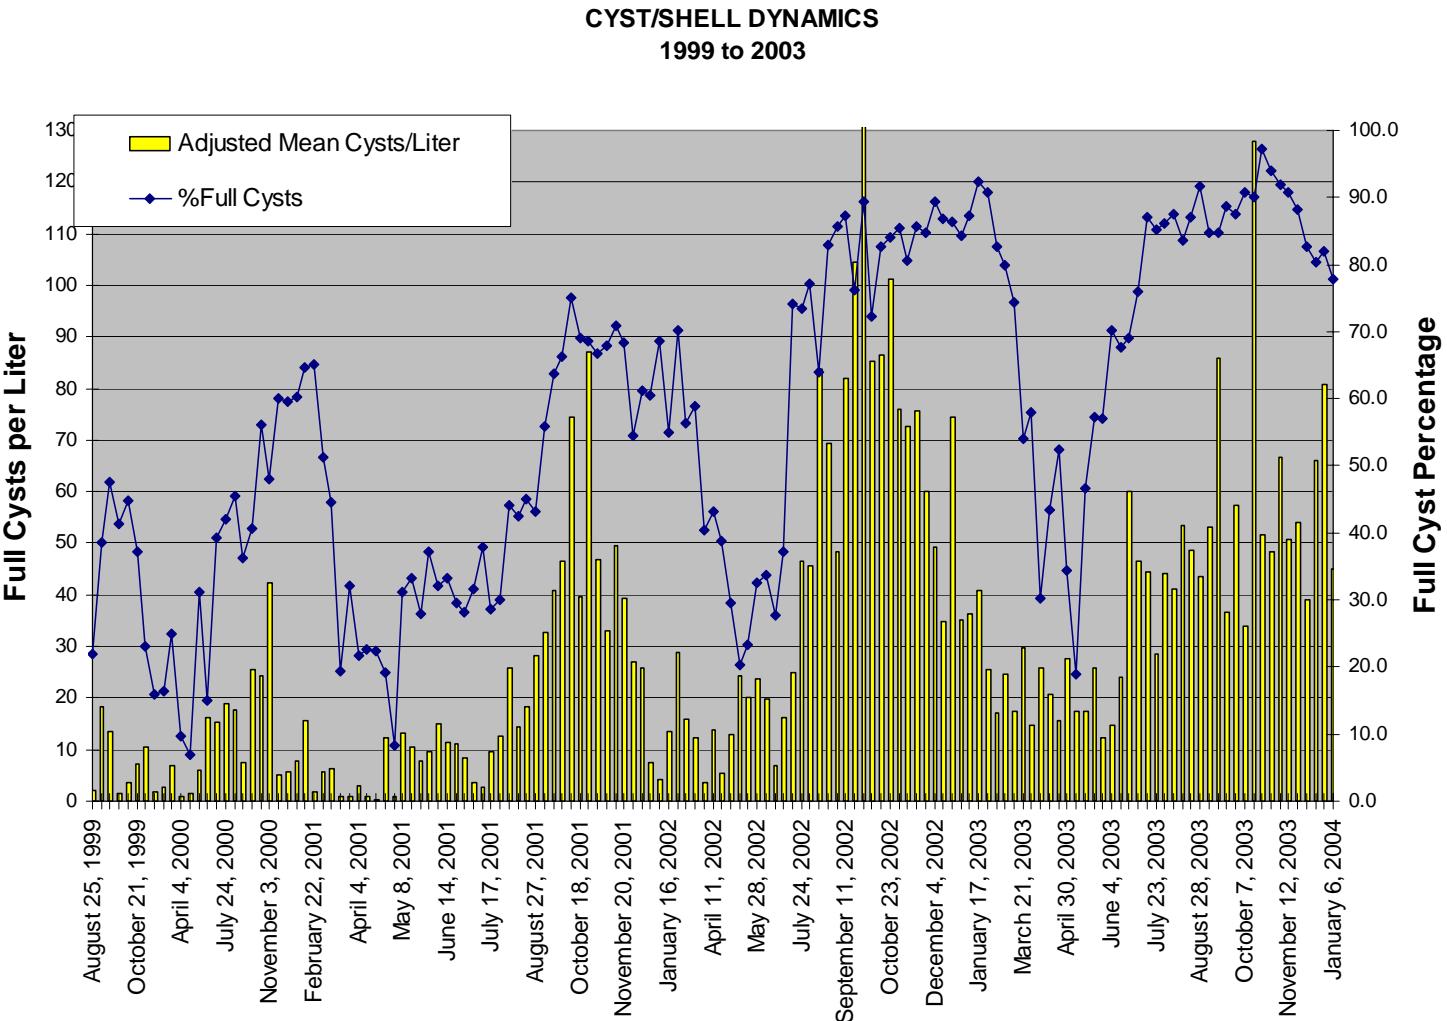

GSL Population Dynamics

Juvenile, Pre-adult, and Adult Population Trends 2001-2003

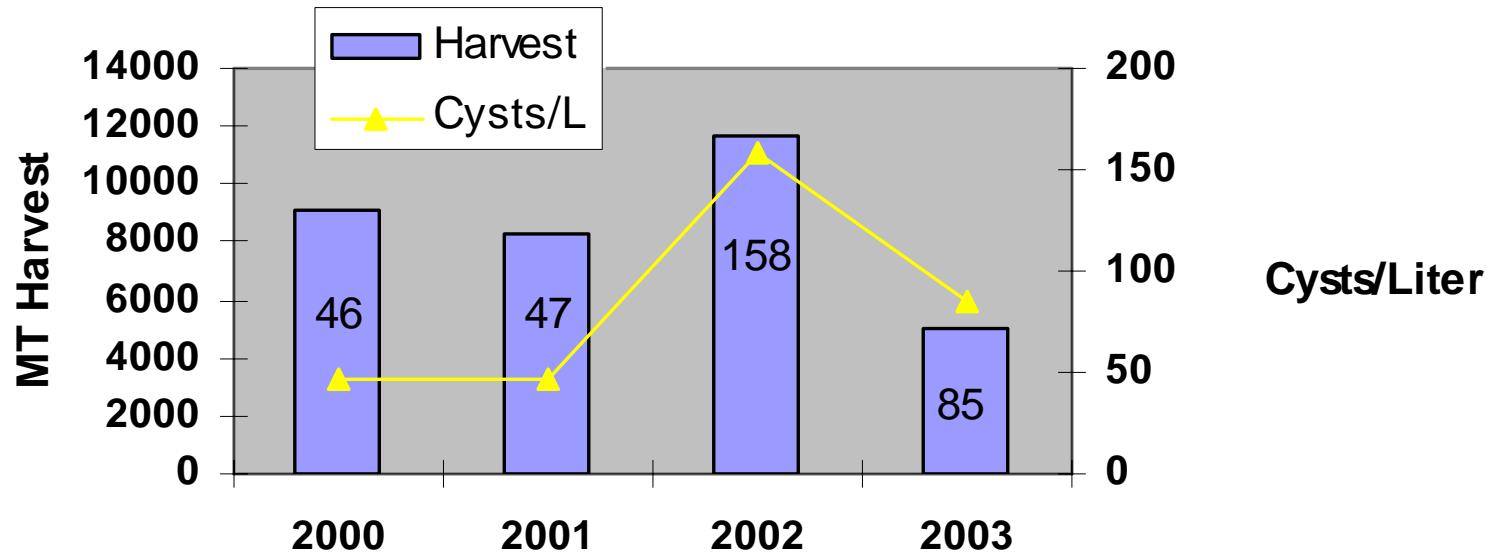

ATF RESEARCH ON THE GSL

Cyst Abundance

GSL Artemia Industry Harvest Totals and Cyst Abundance in September

GSL Harvest and September Cyst Abundance

Will the Aral Sea Support a Commercial Shoreline Operation?

Consistent cyst abundance

Small percentage of shoreline is amenable to harvesting

Unknown buoyancy characteristics

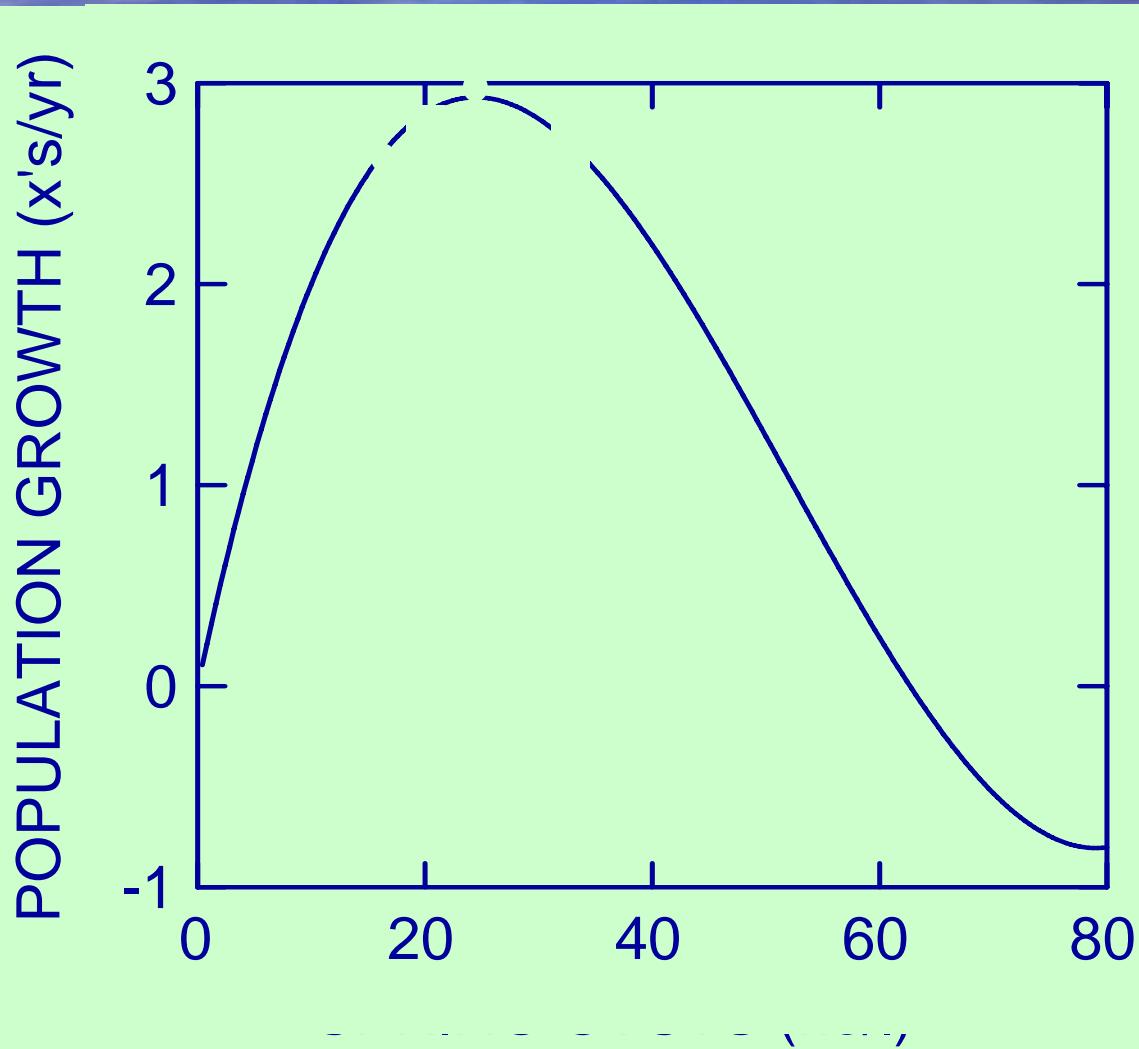

Commercial Harvest on Aral Sea 2004-2005:
Approximately 32 MT Total Material
Estimated 13 MT Brined Weight
Successfully Processed & Marketed = 0 MT
2 months

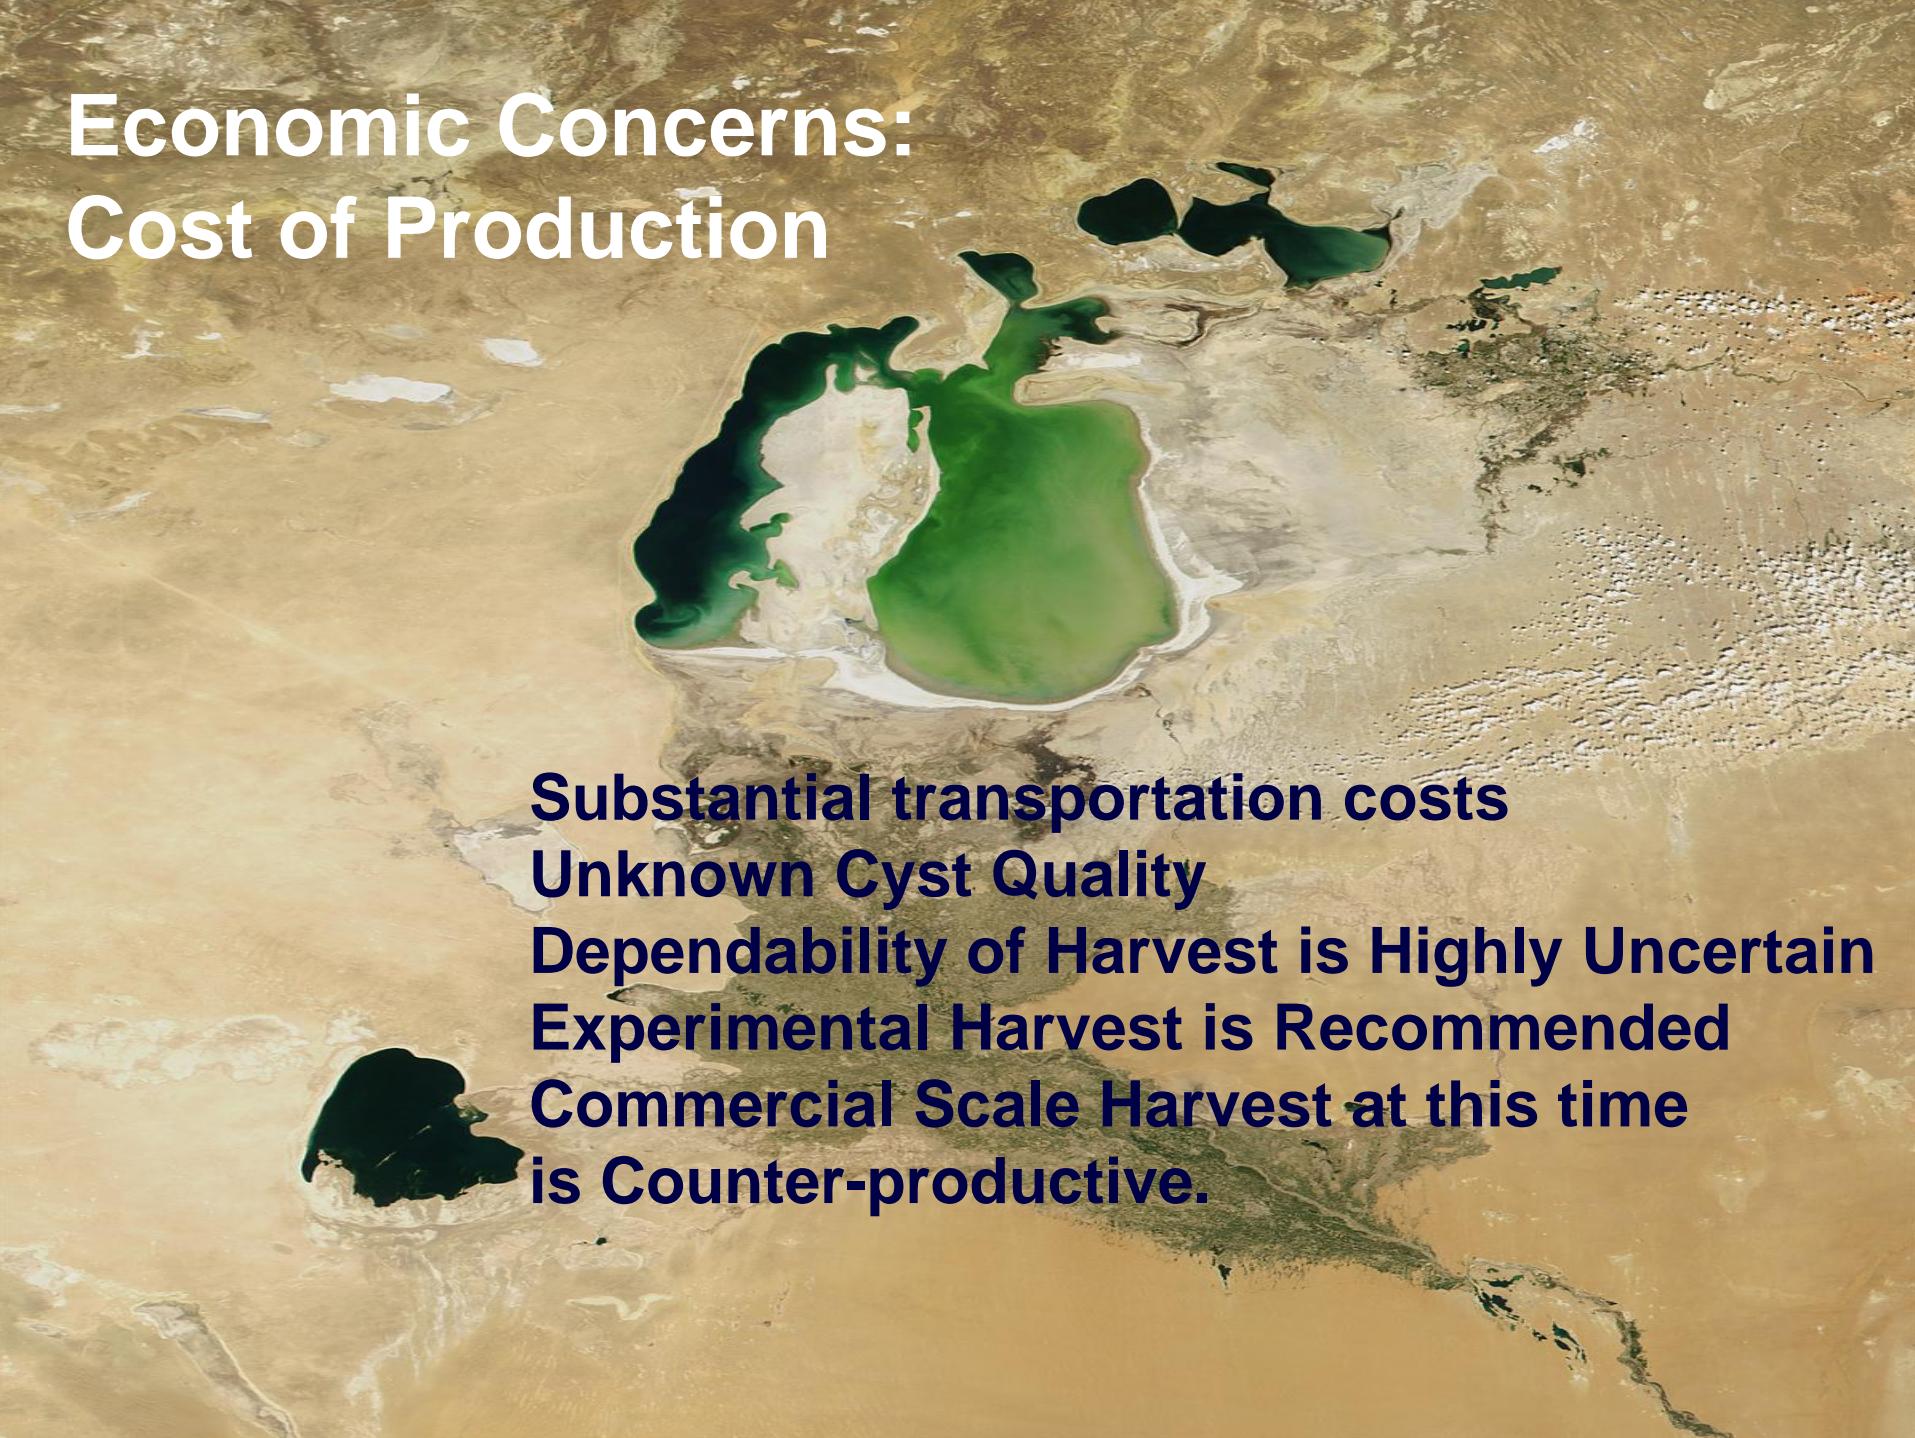

GSL 2002
30 MT Harvested
in < 6 hrs.

ARTEMIA POPULATION GROWTH MODEL

Basis for Continued Research and Restrictions
on Commercial Scale Harvesting

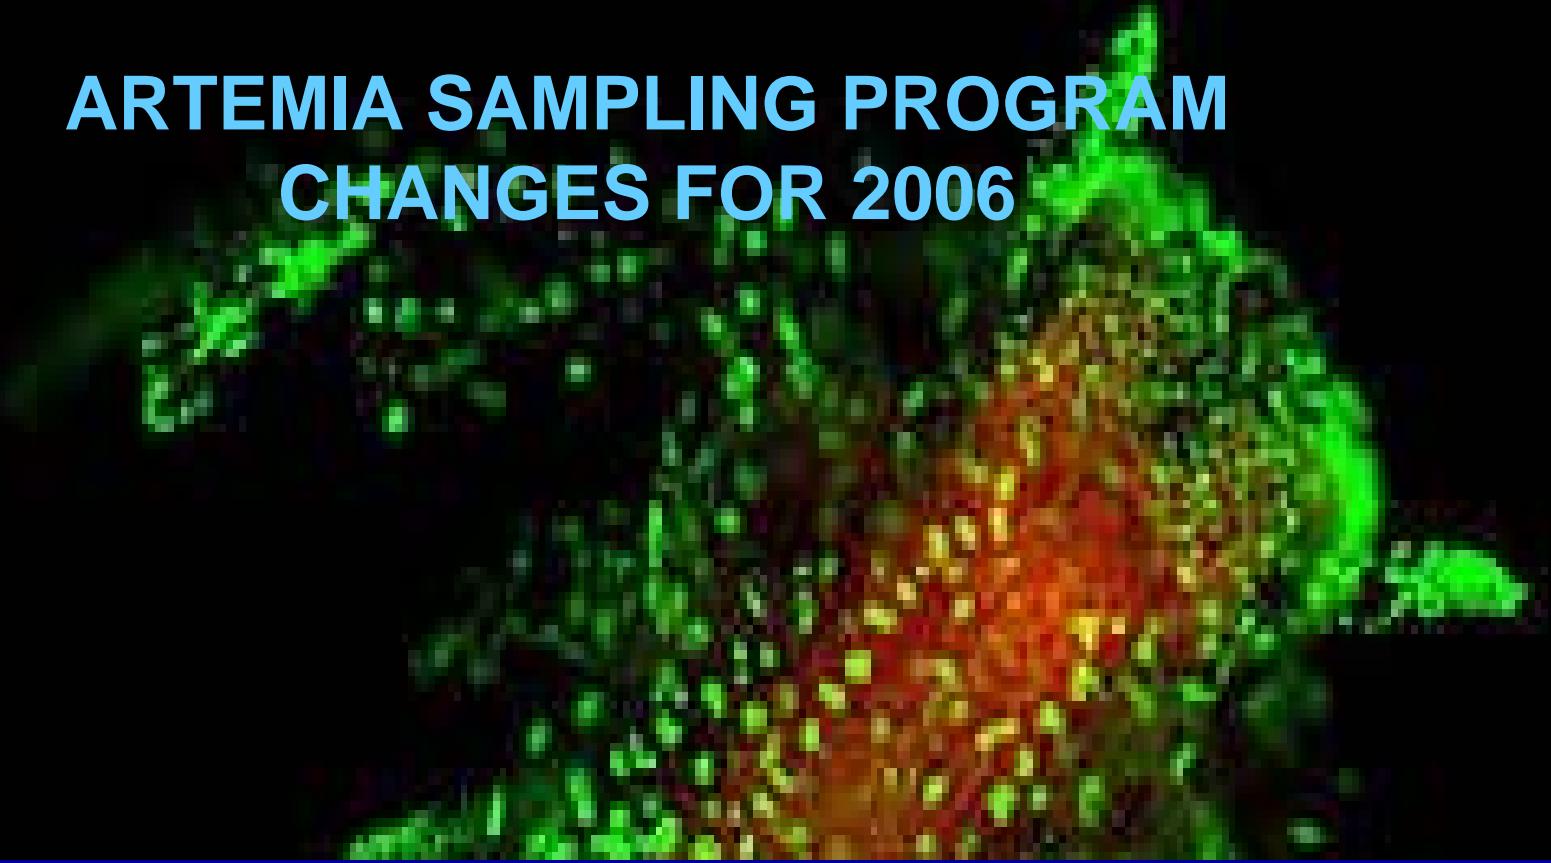

Economic Concerns: Cost of Production

**Substantial transportation costs
Unknown Cyst Quality
Dependability of Harvest is Highly Uncertain
Experimental Harvest is Recommended
Commercial Scale Harvest at this time
is Counter-productive.**

ARTEMIA SAMPLING PROGRAM CHANGES FOR 2006

- Increased sampling frequency
- Additional sampling locations on East Aral
- Measures of cyst quality characteristics
- Chlorophyll measurements
- Samples to USGS for nutrient isotope profile
- Buoyancy tests
- Less emphasis on West Aral Sea
